

PROFESSIONAL SUMMARY

DevOps Engineer with 5+ years of experience designing and automating cloud-native infrastructure on AWS using Kubernetes (EKS), Terraform, Docker, and CI/CD pipelines. Experienced in building scalable, highly available, and secure platforms supporting production workloads with 99.99% uptime and 200K+ concurrent users.

Skilled in Infrastructure as Code (Terraform), Kubernetes administration, GitOps, observability, DevSecOps, and release automation. Strong expertise in CI/CD automation using Jenkins and GitHub Actions, monitoring with Prometheus/Grafana, and cloud security using IAM, Vault, and container security best practices.

Experienced in incident management, SRE practices, infrastructure optimization, and production reliability engineering across multi-environment cloud platforms.

TECHNICAL SKILLS

- **Cloud & Platforms:** AWS (EKS, EC2, S3, IAM, VPC, Auto Scaling, CloudWatch)
- **Infrastructure as Code:** Terraform (Modules, Remote State, Workspaces)
- **Containers & Orchestration:** Docker, Kubernetes, Helm
- **CI/CD & GitOps:** Jenkins, GitHub Actions, ArgoCD
- **Monitoring & Observability:** Prometheus, Grafana, CloudWatch
- **Security & DevSecOps:** SonarQube, Black Duck, IAM, Container Security -Snyk
- **Practices:** CI/CD, DevOps, DevSecOps, SRE (SLI/SLO/SLA), Incident Management, RCA, Release Management
- **Tools:** Ansible, Nexus, Git, ServiceNow, Jira

PROFESSIONAL EXPERIENCE

DevOps Engineer (Independent DevOps Consultant)

JUNE 2024 - Present

- Delivered end-to-end AWS infrastructure and EKS platform solutions for freelance clients, with all work documented and publicly available on GitHub.
- Built production-grade Kubernetes (EKS) clusters with secure networking, autoscaling, and high availability architecture. — [link](#)
- Designed and implemented multi-AZ AWS infrastructure using Terraform, provisioning VPCs, EKS clusters with managed node groups, secure IAM roles, and versioned S3 buckets. — [link](#)
- Implemented secrets management using HashiCorp Vault and GitHub Secrets, enforcing zero-static-credential deployments across pipeline environments.

Key Achievement:

- Maintained 100% deployment success rate across all client projects through standardised CI/CD workflows and automated rollback strategies.

DevOps Engineer Accenture | Hyderabad Sep 2022 – Feb 2024

- Built and optimized CI/CD pipelines using GitHub Actions and Jenkins, reducing deployment time by 25% and standardizing release processes
- Managed production-grade Kubernetes (EKS) platform for microservices with autoscaling, high availability, and zero-downtime deployments
- Developed reusable Terraform modules for multi-environment infrastructure provisioning, reducing setup time by 40% and improving consistency
- Implemented observability using Prometheus and Grafana, reducing MTTR and improving system reliability across distributed services
- Integrated DevSecOps tools (SonarQube, Black Duck) into pipelines, improving code quality and reducing security vulnerabilities
- Led incident response and production issue resolution, strengthening system resilience and minimizing downtime
- Collaborated with cross-functional teams as Release Engineer, coordinating deployments and improving release efficiency
- Managed secrets lifecycle using HashiCorp Vault and GitHub Secrets — automated rotation policies, scoped IAM bindings, and integrated vault-agent into Kubernetes pods for zero-static-credential deployments.

DevOps Engineer

Lince Soft Solutions Pvt. Ltd. | Hyderabad

Jun 2018 – Sep 2022

- Designed and maintained Jenkins-based CI/CD pipelines, saving ~25 hours/week in manual deployment effort
- Containerized applications using Docker, enabling consistent deployments and improving release stability
- Automated artifact management using Nexus, reducing release cycle time by 95%
- Provisioned and managed AWS infrastructure (EC2, S3, IAM, CloudWatch) to support scalable and highly available systems
- Implemented IAM least-privilege policies, improving cloud security posture and reducing risk exposure
- Migrated legacy deployment processes to modern CI/CD pipelines, reducing release defects by 70%
- Implemented automated rollback and fault-tolerant deployment strategies, reducing MTTR from hours to minutes
- Established Git workflows (Git Flow, PR-based approvals), reducing integration conflicts and improving team productivity

PROJECTS

Terraform-based AWS Infrastructure Templates

- Designed production-ready Terraform modules supporting multi-environment infrastructure (dev, QA, production), reducing configuration drift and improving deployment consistency across teams.
- Enabled **remote state management** and workspaces to improve collaboration and lower misconfigurations by 70%.

Microservices Deployment on Kubernetes

- Deployed microservices-based applications (10+ services) on Kubernetes (EKS) using Helm, enabling zero-downtime releases and autoscaling for production workloads.
- Integrated **Helm deployments with CI/CD pipelines** to deliver versioned microservice releases with **Horizontal Pod Autoscaling (HPA)**, reducing rollout risk by ~80% and release-related incidents by ~70%.

Secure CI/CD Pipeline

- Designed and implemented CI/CD pipelines supporting multi-service deployments across environments, enabling automated releases and reducing manual intervention.
- Embedded **SonarQube gates** to block low-quality changes, reducing defects by 100% pre-production.
- Added **Black Duck scanning** for open-source risk, decreasing exposure window.

Deployment Metrics Monitoring & Reporting Platform

- Designed and implemented centralized observability platform using Grafana and Prometheus, monitoring infrastructure and application metrics across distributed services.
- Developed **Python** automation to extract deployment data from **IBM Urban Code Deploy** and server metrics (CPU, memory, traffic), storing it in MySQL and creating client-specific Grafana dashboards for operational insights

EDUCATION

Bachelor of Technology (B. Tech) in Computer Science and Engineering

JNT University, Kakinada, India | 2015

CERTIFICATIONS

- CLF-C02 AWS Certified Cloud Practitioner
- Academy Accreditation - Generative AI Fundamentals (Databricks)
- AIF AWS Certified AI Practitioner (Pursuing)
- AWS Solutions Architect Associate (Pursuing, expecting Jul 2026)

ACHIEVEMENTS

- Awarded **Accenture Celebrates Excellence** for outstanding performance and innovation in DevOps delivery.
- Reduced ~20% AWS infrastructure costs by implementing autoscaling and resource optimisation strategies.
- Improved deployment reliability by migrating legacy systems to modern Continuous Integration Continuous Deployment (CI/CD) pipelines.
